

## PLASMA FIBROBLAST

Fibroblast Plasma Therapy is a non surgical skin tightening and lifting procedure that turns back time by delivering amazing youthful results to aging AND dull skin.

This procedure is more affordable than most other less effective skin treatments and creams ; more affordable than surgery with lower risk and has minimal downtime. Y

You can usually see results immediately and it continues to rejuvenate the treated face and body for up to 5 years. This time frame can vary from person to person depending on health, medication and lifestyle. Having said this; of course there will always be a small minority that may require a couple of treatments before they see the miracle that others see on their first treatment.

The instrument itself is small and although not intimidating can be dangerous in the hands of someone who is not qualified to use it. If you decide to shop around... be warned; This device is something you should definatley not try todo on yourself given the chance.

The fibroblast plasma device does not touch the skin when applied. When the tip of the pen is close enough to the skin layer, oxygen-nitrogen emits an arc (electrical discharge) leaving what is called a carbon dot on your skin. The placement of the carbon dots causes the skin to contract

The electrical charge breaks down the proteins in the skin and encourages tissue regeneration.

The plasma charge on the skin feels hot and cold and could be likened to the sensation of tiny pin pricks.

Not uncomfortable for most people however it would be advised to maybe treat up to only 2 areas at a time for quicker healing and down time.

You want the dots to remain for at least a minum of 72 hours for effectiveness of the treatment.

The length of the procedure varies depending on the area treated. Smaller areas 20 to 30 mins.

Coling gels can be also applied to minimize the tingling and burning sensation whenever possible. Please ask about our painfree method.

Aftercare is a very important procedure that you must do at home to ensure the longevity of the treatment and speedy healing

Reduction of deep wrinkles  
pigmentation (consult is needed to determine suitability)

Sun damage and liver spots, loose and crepey skin, hooded eyelids, brow lifts, Jowl lift, under eye bags, tummy tightening, saggy arms, neck, crows feet and brows, smokers lips and stomach
